The Innovation Studio is a space developed for teachers and their students to gain hands-on experience that complements learning received in the classroom.

With the support of Endress+Hauser employees, students will have the opportunity to learn STEM through robotics, coding, designing through 3D printing and more!

The studio offers curriculum tied to K-8 state standards in Math, Science, English, Social Studies and Art, as well as application to High School standards. This space is the perfect place for a class to learn STEM through integrated curriculum.

The units and lessons are aligned with national standards. The following sets of standards were selected to be used in the Innovation Studio:

- Common Core State Standards (CCSS)
- Next Generation Science Standards (NGSS)
- Standards for Technological Literacy (STL)
- International Society for Technology in Education (ISTE)
- Computer Science Teachers Association (CSTA)
